SEDARO

// COMMERCIAL OFFERINGS

# Software Licensing & Implementation

Sedaro offers flexible commercial software licensing and implementation packages designed to support organizations across a range of deployment environments, mission requirements, and scales of operation.

Our standardized commercial offerings provide predictable pricing, scalable software access, and flexible implementation options to help customers deploy, integrate, and extend the Sedaro Platform.

01 // SOFTWARE LICENSING

## Software Licensing

Sedaro Platform licenses provide access to our integrated digital engineering, modeling, simulation, and analysis environment, including available components of the Sedaro Content Library. License offerings support unlimited authorized users and scalable computational resources.

LIC · 01

### Sedaro Cloud STANDARD

Subscription access to the Sedaro Platform hosted and maintained in Sedaro-managed commercial cloud infrastructure.

LIC · 02

### Sedaro Cloud ACCREDITED

Subscription access to the Sedaro Platform in accredited environments (e.g. IL6, TS/SCI) supporting applicable government security and classification requirements.

LIC · 03

### Sedaro Self-Hosted

Software licensing for deployment within customer-managed infrastructure, including private cloud, on-premises, and secure environments.

LIC · 04

### Sedaro Self-Hosted Maintenance & Support

Software updates, maintenance, and technical support for self-hosted deployments.

Licenses are offered under standardized commercial subscription terms, with options for additional computational capacity, deployment configurations, and support requirements.

02 // IMPLEMENTATION SERVICES

# Implementation Services

Sedaro provides standardized commercial implementation services through **Sedaro Implementation Units (SIUs)**, a flexible, fixed-price mechanism for configuring, integrating, and extending the Sedaro Platform.

SIUs are allocated to predefined implementation packages within Sedaro's commercial Work Item Catalog, which organizes offerings by capability and complexity.

| NO. | OFFERING | DESCRIPTION |
|---|---|---|
| 01 | **Platform Configuration & Deployment** | Environment configuration, deployment support, and accreditation support |
| 02 | **Models & Simulators** | Physics-based models, agent models, and external simulator integration |
| 03 | **Scenarios & Workflows** | Mission scenarios, simulation workflows, and automated analyses |
| 04 | **Data & Software Integration** | External data connections, APIs, software integration, and orchestration |
| 05 | **Dashboards & Analytics** | Visualization, reporting, and mission analysis interfaces |
| 06 | **Training & Documentation** | User training, technical documentation, and implementation support |

Implementation packages are available in standardized configurations and complexity tiers, each associated with a predefined SIU requirement.

Customers purchase SIUs at established commercial unit prices and allocate them toward approved implementation work items. This approach provides predictable implementation costs while allowing customers to prioritize and adjust implementation activities as their needs evolve.

FIXED-PRICE ONSITE AVAILABLE

**SIUs are fixed-price commercial implementation offerings, not labor-hour or time-and-materials services. Onsite implementation options are also available.**

03 // COMMERCIAL PRICING & AVAILABILITY

# Commercial Pricing & Availability

Sedaro maintains a standardized commercial catalog of software licenses, maintenance and support packages, and implementation offerings.

Pricing is provided upon request based on the selected license configuration, deployment environment, implementation requirements, and applicable commercial terms.

// GET IN TOUCH

**Contact Sedaro to request licensing information, implementation options, or a commercial quotation.**
